

Introducing... Our New Pro-Series Lifters

Our new Pro-Series, diamond-lapped lifters, are machined with the same exacting tolerances that PPPC has always been famous for. Our quality control is unsurpassed. Engine builders and top engineers are commenting that these lifters are dimensionally more consistent and that the finish

and geometry exceeds all other lifters in the industry. PPPC Lifters are individually inspected and diamond-lapped to a mirror surface to aid in camshaft and lifter break-in. Radiuses are consistent within .0001". Even better, they're now available with a variety of coatings to reduce friction.

These new flat-tappet lifters are making it possible to run greater spring pressures than ever before, and to control the acceleration rates of today's current camshaft profiles!

We now offer "re-finishing" services on all of our lifters.

& our new NEXTEL™ CUP Lifters

Our Nextel Cup lifters are one of the hottest new items at PPPC. Excess interior material is removed to produce the lightest possible lifter. They come standard with C-350 push rods seats, and a Diamond Lapped finish.
